

Walmart Sales Dataset - Data Cleaning Report

Objective

The objective of this data cleaning process was to prepare the Walmart Sales dataset for accurate analysis by checking data quality, removing inconsistencies, standardizing values, and applying appropriate data formats in Microsoft Excel.

Cleaning Operations Performed

1. Missing Value Check: Examined all columns for blank or missing values. No missing values were found.

2. Duplicate Removal: Used Excel's Remove Duplicates feature to identify duplicate records. No duplicate rows were detected.

3. Data Standardization:

- Converted the Date column to Date format (dd-mm-yyyy).
- Standardized Holiday_Flag values from 0/1 to Yes/No for better readability.
- Standardized Temperature, Fuel_Price, CPI, and Unemployment to two decimal places.
- Formatted Weekly_Sales using the Accounting format with two decimal places.

4. Data Type Formatting:

Store: Whole Number

Date: Date

Weekly_Sales: Accounting

Holiday_Flag: Text (Yes/No)

Temperature: Decimal (2 decimal places)

Fuel_Price: Decimal (2 decimal places)

CPI: Decimal (2 decimal places)

Unemployment: Decimal (2 decimal places)

Result

The dataset was verified to contain no missing values or duplicate records. Data formats and values were standardized to improve consistency, readability, and readiness for analysis in Excel, Power BI, SQL, or other analytical tools.

Conclusion

After completing the cleaning process, the Walmart Sales dataset became consistent, well-formatted, and suitable for further exploratory data analysis, visualization, and business intelligence tasks.
